VIA MAN-IT:
Purpose-built, out-of-the-box, cost-effective MES software that empowers your operations.

### Drive Efficiency and Traceability. Improve Scalability. Minimize Risk.

Did you know that by implementing an MES solution you can increase productivity and reduce inventory carry costs by up to 20%?

VIA MAN-IT is a purpose-built, out-of-the-box, cost-effective MES system that can optimize and transform your manufacturing operations. Our intelligent, automated system helps you:

- Mitigate risk with a fully supported solution that reduces downtime, improves product quality, and maintains compliance with the latest regulations.
- Reduce costs and improve scalability with drag-and-drop, no code configuration capabilities.
- Gain valuable insights and visibility into your operations with enhanced lot tracing and robust reporting and analytics.
- Get up and running quickly with expert workflow set up and training.

Minimize risk and non-compliance

- Maximize yield and stop manufacturing defects by creating a digital twin of every product produced.
- Reduce the risk of prolonged outages or problems by ensuring issues are promptly addressed.
- Easily facilitate document control, training, and competency management, as well as audits associated with ISO9001 compliance.

"We took advantage of our employees knowledge of MAN-IT to implement it in other facilities and encourage standardization across our organization. This not only provided a cost savings for us, but also a lesson in how to take control of our processes."
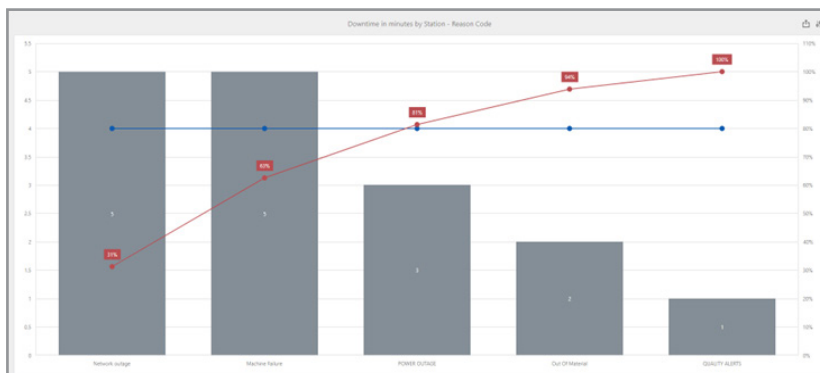

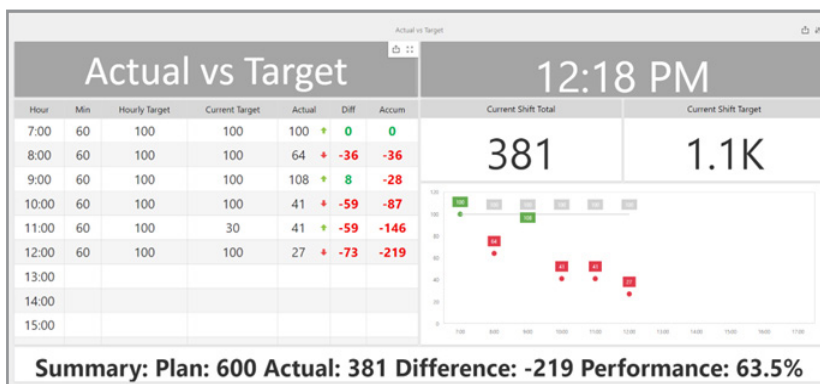

-Francesc Chavarria, Global IT Manager, Merit

Streamline production with best practices

- Easily create standardization across multiple lines and facilities.
- Increase visibility into inventory and WIP with enhanced tracing capabilities: track warehouse locations, batch sizes, and movement throughout your facility.
- Improve productivity with built-to-order processing.
- Keep your production floor running smoothly by maintaining constant communication between machines/devices.

Access actionable data & insights

- Make data-driven decisions and launch corrective actions with pre-built dashboards, custom KPIs, real-time shop-floor performance data, and workforce visibility.
- Increase throughput by monitoring cycle times during each state of the production process and exposing bottlenecks.
- Improve product quality with real-time monitoring and data capture, automated quality checks, and connection to supplier databases.

Learn how one customer saved

75%

on implementation costs with VIA MAN-IT's no-code configuration.

Improve revenue and your bottom line

- Reduce the need for continuous customization with a single, cost-effective solution.
- Streamline production, reduce inventory, lower costs, and increase profits with functionality that enables build-to-order and pick-and-pack ordering.
- Save money by eliminating excess inventory with Just-in-Time Sequencing.
- Easily expand with multilingual capabilities.
- Save on labor costs by launching new lines quickly with minimal additional implementation costs.
